Lyon - Information Systems Expert

RPI – Bachelor's Degree

From October 2021 to September 2022 ISITECH

Lyon - IT Project Manager

MIASHS – Bachelor's Degree

2021 University of Lyon III

Mathematics and Computer Science Applied to Humanities and Social Sciences

Professional Experience

Full-Stack Developer

Since September 2021 CGI Lyon Vaise

At CGI, I work for SNCF on several large-scale HR applications used by several hundred thousand users (employees and their families). I led application modernization efforts, contributing to their migration to AWS and the management of technical obsolescence (Java, Angular, Docker). I also designed and deployed a multi-factor authentication (MFA) system with OTP and trusted device management, significantly strengthening access security.

Graphic Designer

From March 2015 to April 2015 Autocolor Givors

This internship as a graphic designer allowed me to broaden my skills in the digital field. I contributed to the creation of logos for an association aimed at young people, as well as the customization of T-shirts and various promotional materials. This experience allowed me to develop my creativity and acquire new technical skills.

Assistant - Database Management

From March 2014 to April 2014 L'appart Givors

During this assignment, I worked with SQL Server and handled large volumes of data to perform various tasks, including identifying users who had been inactive for several months. This experience allowed me to become familiar with databases and data processing at an early stage.

Skills

Git

Versionning, CI/CD, implementation of commit/code standards

Jenkins

Implementation of automated pipelines, package creation

AWS

Application migration to the cloud, technical obsolescence management, CI/CD, IAM

Jira

Dashboard implementation, ticket tracking, data extraction for analysis

Technical skills
